Replacement Abstract

Please replace the Abstract currently on file with the following replacement Abstract:

ABSTRACT

A method and a system for providing easy access to an e-mail account, in particular a POP3/SMTP e-mail account, via a mobile communication network. The method comprises the steps of: providing a mobile terminal having a generic e-mail configuration with at least one default POP3/SMTP server address, setting up a connection to a server identified by the default POP3/SMTP server address via the mobile communication network using a standard POP3/SMTP protocol, and in the proxy server evaluating a user identification based on specific information assigned to the user, identifying a user e-mail account assigned to the user identification, and setting up a connection to the identified e-mail account of an e-mail system.
